RAMSEY-VISOR

IT PROTECTS YOU—

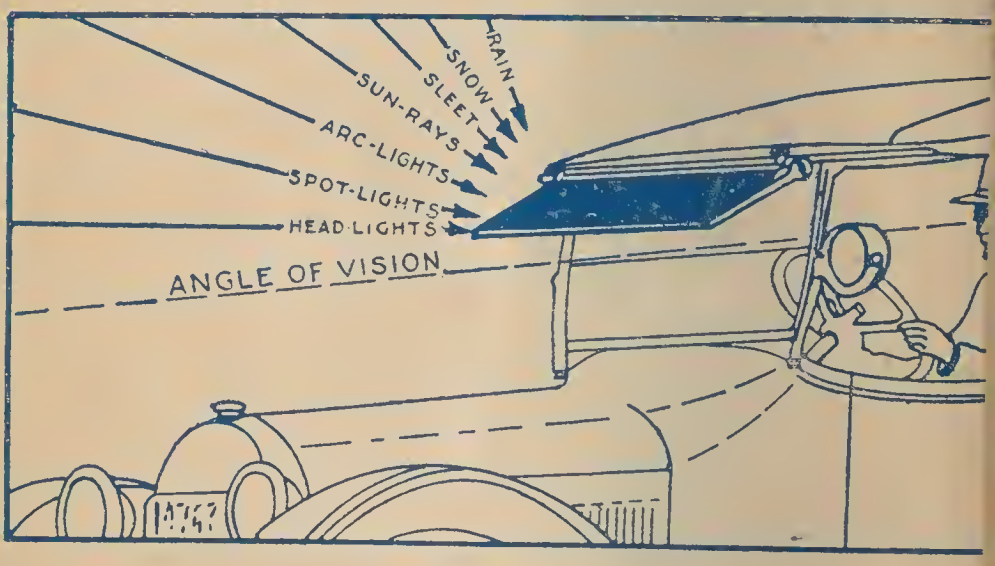
At a Trifling Cos

—from the ***Dangers of Driving at Night***, shielding you eyes from the blinding glare of high-powered headlight spot-lights, arc-lights, electric signs, etc.

—from the accumulation of ***Rain, Snow and Sleet*** upo your windshield, which obstructs your vision of pede trians, vehicles, etc.

—from ***Sun Glare*** and ***Road Glare*** and consequent tire dazzled eyes and over-burdened nerves.

—from ***"Driver's Headache"*** and the ***"Automobi Stare"***—and adds immeasureably to the safety and com fort of yourself and your passengers.



Adjustable for any angle. Made for open and closed car Steel frame—Fabric leather cover.

"SIMPLEX" Model, 10" x 40" . . . . . Price $ 7.00
"DE LUXE" Model, 10" x 38", 40", 42" and 44" Price $14.00

SPECIAL OFFER: Send us remittance together with the *name, year* and ***model*** of your car and we will send you a RAMSEY-VISOR. Try it for five days and if you are not perfectly satisfied return it to us and we will refund your money.

HEALTH AND PLEASURE

The people of this State now own nearly five hundred thousand automobiles. And the work of investing in motor cars goes bravely on. More automobiles mean more time spent in healthful outdoor existence, more economy and celerity in transportation, more good roads and more comfort and happiness generally. So more power to the horseless vehicle!

100.9 **Left** on State st. to park, **Erie,** 101.

KEEP A RECORD OF GASOLINE

In Keeping any record, it is obvious Some rules must govern procedure. The above are submitted as necessary.

It Will Be Understood that the **Full Tank** is necessary to start and continue the record. The **Full Tank** positively determines the **Amount** of **Consumption** for **Mileage Obtained.** It is not always possible to determine this otherwise.

Explanation: Assume that your brand of gasoline is used; that the record is started January 10th; that the motor tank holds, **Full,** twenty gallons—

Fill the tank with whatever amount is necessary to do so and enter 20 against January 10th. Also the **Odometer Reading** which is assumed to be 3520.

January 12th it is necessary to refill and 12 gallons is required to do this. Enter 12 against January 12th, also Odometer Reading which is shown to be 3850. By deducting the reading of January 10th (3520) from that of January 12th (3700) 180 miles is determined as the mileage on the 12 gallons consumed, or 15 miles to the gallon, as **Shown** by the amount **Just Pumped.**

Keep a record monthly to show condition of your motor.

SAFETY DON'TS FOR MOTORISTS

on't forget to slow down at street or road intersections. ay save a human life.
on't forget to look to the right and the left before ing a railroad crossing.
on't forget, when signaled by a vehicle in your rear, rn slightly to the right and allow such vehicle to pass on your left.
on't forget the pedestrians. They, too, have rights on streets and highways.
on't forget that all motor vehicles must be equipped with uate brakes in good working order and adequate horns ther signaling devices.
on't forget that in case of accident, you must stop imately and give your name, address and license number e injured party or a police officer. If no police officer the vicinity or the place of injury or accident, report same to the nearest police station or judicial officer.

195-199 WATER ST. BINGHAMTON, N. Y

USE PLENTY OF OIL AND GREASE

The pleasure to be derived from automobiling, the safe
of the occupants of the car, the saving of hundreds of do
lars to every owner, the keeping of appointments, all depen
upon proper use of oil and grease.

Lubricating System:

Proper Lubrication is more important than any other or
item. Many times troubles of a motor car can be traced t
lack of lubrication or the use of an inferior lubricant.

No Definite Rule can be followed as to the use of lubr
cants. These depend entirely upon conditions; naturally, th
more the car is used, the more it should be lubricated.

Schedule of Lubrication:

Every 100 Miles—Give grease cups a turn or two o
springs, rear axle bearings, fans, foot-brake connection
steering knuckles, steering connection, clutch, any about en
gine. Inspect crank case oil gauge for proper level of oil.

Every 500 Miles—Speedometer shaft, universal joint, sel
starter bearings, spark throttle control, generator bearing
and drive steering column.

Every 1,000 Miles—Screw down all grease cups and refi
on springs (also between the leaves), wheel bearings, trans
mission, magneto, steering gear case, clutch, differentia
rear axle.

Every 2,000 Miles—Drain crank case when engine is ho
allowing engine to run a moment to thoroughly cleanse itsel

Do not flush out with kerosene as it's impossible in mos
engines to get the kerosene all out.

Refill with fresh lubricant to proper level.

Drain transmission and thoroughly cleanse with kerosen
Refill with fresh lubricant to proper level.

Drain rear axle and differential and thoroughly cleans
with kerosene. Refill with fresh lubricant to proper leve

WHAT THE AUTOMOBILE CLUBS OF NEW YORK STATE HAVE ACCOMPLISHED

1—They have exposed and prevented the operation of questionable accessory and tire concerns.

2—Were the first to urge the building of good roads in New York State, and our 8,000 miles of paved highways are largely the result of co-operation by the New York State Automobile Clubs.

3—They have secured reciprocity in Motor Licenses between this and other states, including Canada.

4—As custodians of the interests of the motorists of the State, have continuously fought without hesitancy any unfair legislation, with the result that not one single law among the hundreds affecting the motorist, introduced each session, has ever passed in the last ten years when opposed by the New York State Automobile Clubs, with one exception.

LUBRICANT FOR SPRINGS

n lubricating automobile springs the greatest trouble is nd in keeping the lubricant from being squeezed out under ssure. A compound that obviates this is found in graphite l beeswax mixed to a paste and spread upon each leaf. viously, the spring must be taken apart to apply this lubrit.

TROUBLE RULES FOR TROUBLESOME AUTOMOBILES

1. Gasoline—Is tank full? Are pipes clean? Is gasoline clean? Is carburetor clean? If carburetor needs adjusting do it, otherwise leave it alone. Does manifold leak?

2. Compression—To test: Open all petcocks except the one on cylinder to be tested; crank engine, noticing how strong the compression is in each cylinder.

3. Ignition—A. Test for a spark by taking wire off any plug; hold wire about ⅛ of an inch from plug; crank engine with switch on. Spark should jump to plug.

B. Are the batteries run down? Does the vibrator (if any) buzz? Is the timer clean? Do timer points make good contact?

C. Are any wires loose, burned, wet, broken or short circuited? Are spark plugs clean and are points 1-50 of an inch apart?

D. Does magneto armature revolve? Is safety spark gap clean? Are interrupter points clean and adjusted right? Do all brushes make good contact? Is distributer clean? Is distributer motor loose, broken, or making poor contact?

Loose wires and terminals and neglected batteries cause much trouble.

Put distilled water in your batteries every two to four weeks.

CASTOR OIL ON EYELASHES

Every motor car rider has experienced the discomfort dust in the eyes, and also from the effects of cold wind A suggestion has been made that these discomforts may greatly alleviated by applying castor oil along the eyelashe This, it is claimed, will catch most of the dust before it ca enter the eye, and also it protects the eyes from the chillin effects of the wind.

TROUBLES AND THEIR SOURCES

A Great Deal of time is wasted by many motorists whe ar develops trouble, by not giving sufficient thought, if any o the symptoms shown from the time trouble was first no iced to the time an attempt is made to set matters in orde Diagnosing automobile troubles requires thought and reasor

Never Tamper with or destroy the arrangement of part of the engine or car unless fully satisfied of the real trouble Note the symptoms and endeavor to discover the seat of th disturbance. If not successful in this see the nearest deale or some one qualified by experience and have, whatever need attention adjusted in a correct manner.

Make It a Point to understand the car thoroughly. Re nember when diagnosing trouble there are two essential necessary—first, gasoline; second, a spark.

Gasoline, in vapor form, must reach the inside of th cylinders and the spark must be there at the proper time t ignite the gas. If you have both, something is bound t happen, even though it is but a single explosion. Bear i mind that even though there be gasoline and spark, the engin will not run properly unless the cylinders receive the ga mixed in the correct proportion with air.

Remember that if an engine is not properly lubricate and cooled, it will heat.

In Summing Up the chief troubles it is found that mos all are due to **Ignition, Carburetion** and **Lubrication.**

If trouble occurs, find out which is responsible.

Listed Below is a summary of troubles and their causes

Engine Fails to Start: Gasoline exhausted; mixture to lean; water in gasoline; supply shut off; water in carburetor carburetor frozen (winter); switch off; dry cells or batter weak or not properly connected.

Engine Runs Irregularly (Missing): Usually ignitior caused by (a) dirty spark plugs, (b) improper gap in spar plugs, (c) broken porcelain in spark plugs; poor compression leaky intake manifold; bad mixture; valves set too high o too low; valve sticking.

Engine Stops Suddenly: Usually ignition; water or dir in gasoline; overheated—lack of oil or water; gasoline tan empty (usually causes engine to stop gradually).

Overheating: Lack of oil or water; loose fan belt; car bon; spark retarded; mixture too rich; sediment in radiato

Engine Knocks: Carbon; overheating; loose connectin rod or wrist pin; broken piston ring; spark too far advance

Engine Hisses While Running: Spark plug porcelai broken; exhaust pipe cracked or joint loose; spark plug loos in cylinder.

Excessive Smoke from Muffler: Over-lubrication (blu smoke); mixture too rich (black smoke).

Lack of Power: Loss of compression; carburetor flood ing; weak ignition; lack of oil or water; brakes dragging flat tires; lack of gasoline (if line is stopped motor will spi back through carburetor with throttle open).

Back Firing (Through Carburetor): Intake valve o exhaust valve holding open.

Engine Spits Back Through Carburetor: (Erroneousl called "backfiring.") This usually indicates too weak a mix ture and may be caused by—Carburetor adjusted for to much air and too little gas; dirt in gasoline passage or nozzle air leak around intake to carburetor.

Gasoline Record: The Average Motorist confines him self to one brand of gasoline believing that he obtains maxi mum efficiency.

A Simple Method of gasoline accounting that show actual results.

Do This: Fill Motor Tank Full First. Fill tank Ful whenever a pumping is made. **Always Make Record a** time of refilling.

Storage 300 cars, on the level

KEEP MUFFLER CUT-OUTS CLOSED

Horns are intended for protection and not for amusemen Use them with intelligence.

Do not turn from a parked position into the traveled high way without first looking to the rear for following traffic.

Speed means serious and even fatal accidents, increase tire and repair expense, nervous prostration and loss money, time and pleasant disposition.

TO KEEP OUT OF TROUBLE

Use chains when pavements are slippery.
Test your brakes frequently.
Don't use glaring headlights in the streets of the city.
When approaching an automobile at night, coming in an opposite direction, slow down and dim your headlights.

TOURISTS REQUIRE NO BOND

It is not now necessary for American tourists to obtain a c
tom bond before entering Canada, provided the entry is
pleasure purposes only, and not over ten days. All that
required is that an application be made at the Collector
the Port of Entry for a Ten-Day Permit to tour Canada.

If a longer stay than ten days is planned and not m
than six months, a bond for double the value of the
must be given. A bond may be obtained at Port of En
upon payment of a fee of $5.00—no other expenses nec
sary. This bond is only required when the visit in Cana
exceeds ten days.

TIMELY SUGGESTIONS

Never under any circumstances drive fast when approa
ing or passing a school.

When unable to see what is ahead of you at any time, sl
down.

Upon a signal from another driver approaching from
rear at a reasonable speed, pull over to the extreme rig
and allow him to pass. The law compels you—courtesy
mands it.

Spasmodic spurts of speed are dangerous.

The Sign of a Good Printe
